# S  Complete E1 distributions | nominal CV 0 to 1

Registered E1 | q = 0.5 | n = 1,000 | R = 2,000 per CV

Dotted lines: simulation truth. Curves use every point-valid saved estimate; counts are valid/planned.
Descriptive distributions without confidence bands. Display selection is post-result presentation; all seven CVs are supplied.
Regular-grid exact/PFML estimates coincide and their curves overlap. Line styles distinguish coincident methods.
