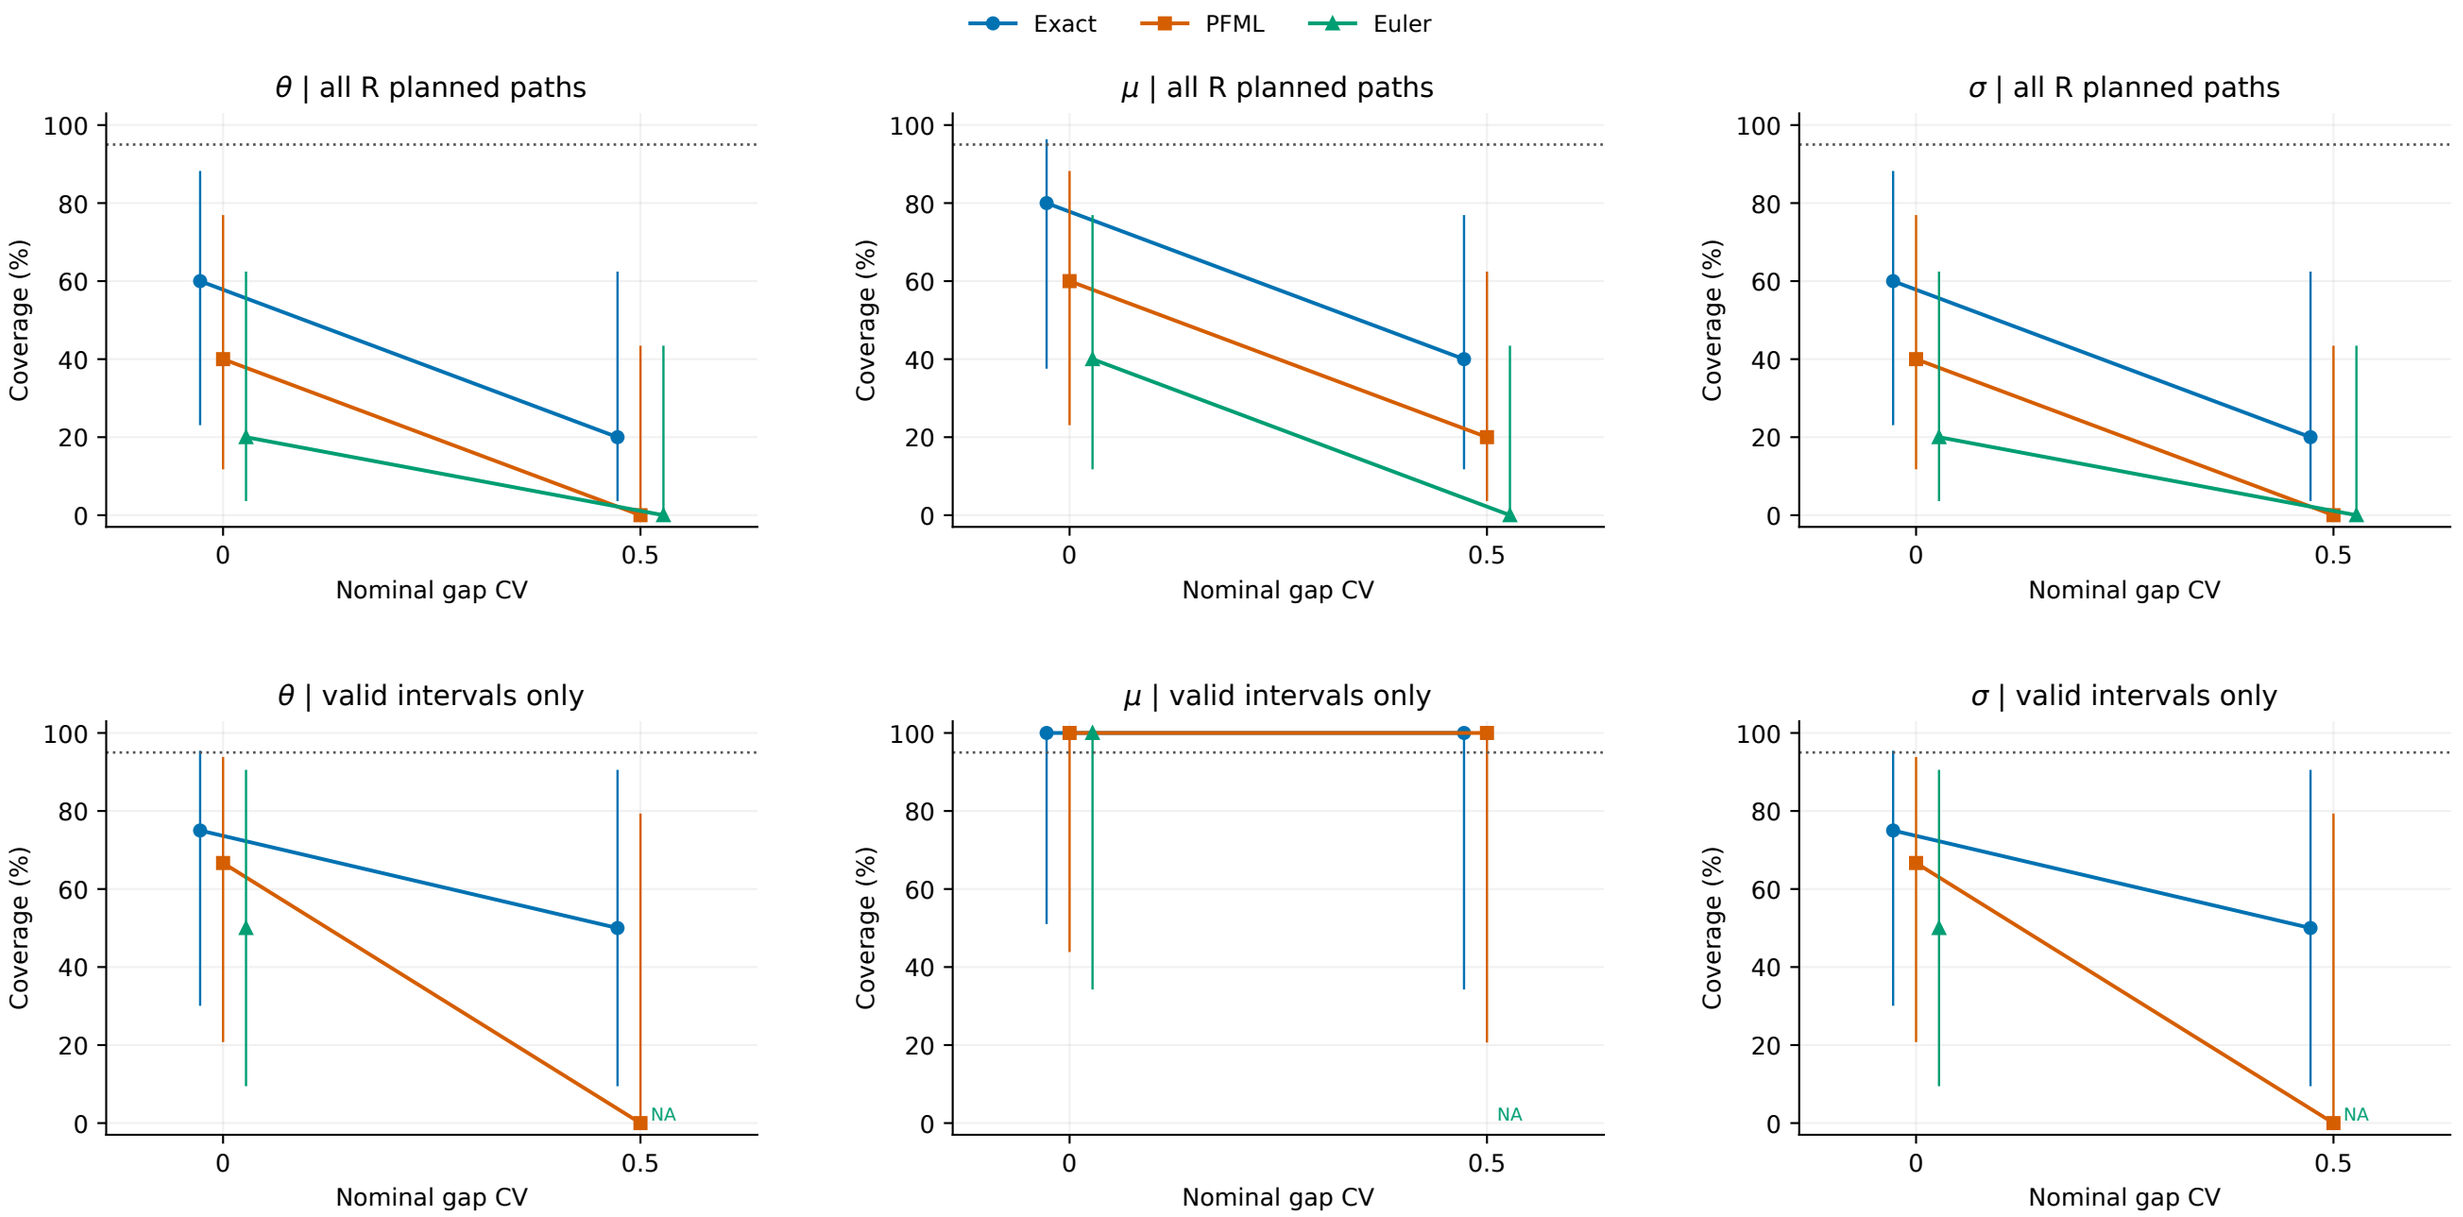
# Week 7  Independent follow-up coverage

LITERAL VALIDATION FIXTURE | VALIDATION ONLY  |  q=2, n=250 observations  |  R=5 per independent CV cell



Bars: pointwise 95% Wilson Monte Carlo intervals. Operational coverage counts unavailable intervals as noncoverage.
Conditional coverage uses each estimator's interval-valid denominator; undefined values are gaps labelled NA. Dotted: nominal 95%.
PFML/Euler Wald covariance is model-based, not robust. These exploratory paths are separate from the unchanged E1/E2 headlines.
