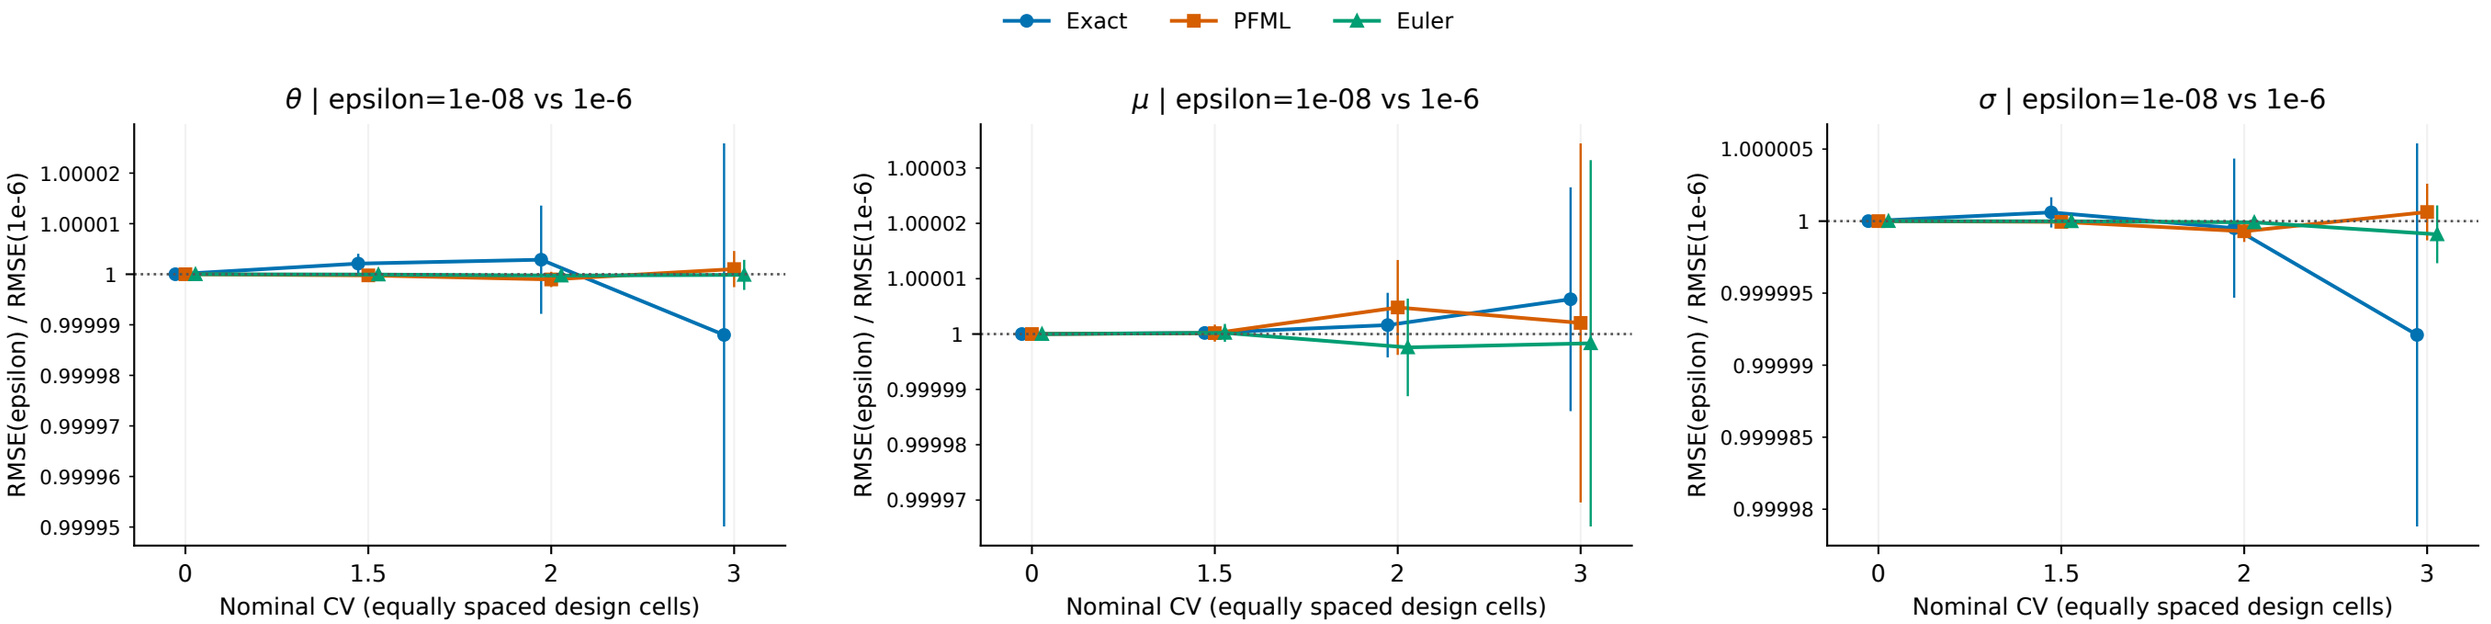
Week 7 Paired RMSE ratios to the registered floor

EXPLORATORY E3 | q=0.5, n=1,000 observations | R=2,000 per physical floor variant



Bars: approximate pointwise 95% paired Monte Carlo intervals; both metrics use the same common-valid point subset.
Ratio bars use the saved asymmetric log-delta limits. The vertical scale is log; a 0 label at the baseline marks a zero ratio off that scale.
CV=0 is one shared control. NA labels mark undefined estimates; absent bars mark undefined uncertainty.
Common-valid S, in Exact/PFML/Euler order (all parameter rows share these counts):
epsilon=1e-08: CV=0: 2,000/2,000/2,000 | CV=1.5: 2,000/2,000/2,000 | CV=2: 2,000/2,000/2,000 | CV=3: 2,000/2,000/2,000
epsilon=0.0001: CV=0: 2,000/2,000/2,000 | CV=1.5: 2,000/2,000/2,000 | CV=2: 2,000/2,000/2,000 | CV=3: 2,000/2,000/2,000
