Higher-lag covariance predicts the PFML mean precision loss
Original fixed N = 1000
New fixed T = 499.5
Mean-estimation SD / reported SE
Empirical fitted-mean SD
Fixed-coefficient covariance prediction
RMS reported standard error
95% Wald coverage (%)
Observed coverage
Population-working Gaussian approximation
Regular
IID r=1
MMPP r=1
IID r=5
MMPP r=5
IID r=20
MMPP r=20
Covariance prediction is exact for a fixed-coefficient linear diagnostic; fitted-estimator and coverage comparisons are approximations.
